CLAIMS

1. Very high mechanical strength steel, characterised in that the chemical composition thereof comprises, in % by weight:

 $0.060\% \le C \le 0.250\%$

 $0.400\% \le Mn \le 0.950\%$

Si ≤ 0.300%

 $Cr \le 0.300%$

 $0.100\% \le Mo \le 0.500\%$

 $0.020\% \le Al \le 0.100\%$

P ≤ 0.100%

 $B \le 0.010$ %

Ti ≤ 0.050%

the balance being iron and impurities resulting from the production operation.

2. Steel according to claim 1, characterised in that it further comprises:

 $0.080\% \le C \le 0.120\%$

 $0.800\% \le Mn \le 0.950\%$

Si ≤ 0.300%

 $Cr \le 0.300\%$

 $0.100\% \le Mo \le 0.300\%$

 $0.020\% \le Al \le 0.100\%$

P ≤ 0.100%

B ≤ 0.010%

 $Ti \le 0.050%$

the balance being iron and impurities resulting from the production operation.

3. Steel according to claim 1, characterised in that it further comprises:

```
0.080\% \le C \le 0.120\%
0.800\% \le Mn \le 0.950\%
Si \le 0.300\%
Cr \le 0.300\%
0.150\% \le Mo \le 0.350\%
0.020\% \le Al \le 0.100\%
P \le 0.100\%
B \le 0.010\%
```

Ti ≤ 0.050%

the balance being iron and impurities resulting from the production operation.

4. Steel according to claim 1, characterised in that it further comprises:

```
0.100\% \le C \le 0.140\%
0.800\% \le Mn \le 0.950\%
Si \le 0.300\%
Cr \le 0.300\%
0.200\% \le Mo \le 0.400\%
0.020\% \le Al \le 0.100\%
P \le 0.100\%
B \le 0.010\%
Ti \le 0.050\%
```

the balance being iron and impurities resulting from the production operation.

- 5. Steel according to any one of claims 1 to 4, characterised in that the microstructure thereof is constituted by ferrite and martensite.
- 6. Very high mechanical strength sheet of steel according to any one of claims 1 to 5, characterised in that it is coated with zinc or zinc alloy.
- 7. Method for producing a steel sheet according to claim 6, characterised in that it comprises the steps which consist of:
- producing a slab whose composition is in accordance with any one of claims 1 to 4,
- hot-rolling then cold-rolling the slab in order to produce a sheet.
- heating the sheet at a rate of between 2 and 100°C/s until
- a holding temperature of between 700 and 900°C is reached,
- cooling the sheet at a rate of between 2 and 100°C/s until
- a temperature is reached which is close to that of a bath containing molten zinc or a zinc alloy, then
- coating the sheet with zinc or a zinc alloy by means of immersion in the bath and cooling it to ambient temperature at a cooling rate of between 2 and 100°C/s.
- 8. Method according to claim 7, characterised in that the sheet is kept at the holding temperature for from 10 to 1000 seconds.
- 9. Method according to either claim 7 or claim 8, characterised in that the bath containing molten zinc or a zinc alloy is kept at a temperature of between 450 and 480°C, and in that the immersion time of the sheet is in the order of between 2 and 400 seconds.

- 10. Method according to any one of claims 7 to 9, characterised in that the bath principally contains zinc.
- 11. Use of a very high mechanical strength sheet of steel coated with zinc or zinc alloy, according to claim 6, in the production of automotive components.
